

# Have the confidence to recommend Active Iron Pregnancy Plus

## Research

Evidence-based research influences decisions to recommend a supplement in **19%** of midwives.<sup>1</sup>

The absorption, compliance, tolerability and efficacy of **Active Iron has been clinically researched.**<sup>2,3</sup>

## Compliance

**94%** of midwives agree that **poor compliance** taking oral iron impacts its effectiveness in increasing iron levels.<sup>1</sup>

Active Iron is clinically proven

**4X better compliance**  
versus other oral iron.<sup>3</sup>

## Absorption

**Better absorption** is the **#1** most important product benefit for 81% of midwives.<sup>1</sup>

Active Iron is clinically proven to provide

**2X** better absorption of ferrous sulfate, and  
**6X** less gut irritation.<sup>2,3</sup>

Despite initial low awareness,

**83% of HCPs would now recommend Active Iron Pregnancy Plus** to mums after learning about the clinically proven benefits.<sup>1</sup>
